

ENGINEERED
FOR SAFETY.

EYE AND FACE PROTECTION.

*No optical illusion,
work safely in style.*

Experts you can trust

Can your workers see all the potentially hazardous areas on their jobsite? Their two most vulnerable areas are their eyes. Every day, 2,000 U.S. workers sustain eye injuries that require medical treatment according to the National Institute for Occupational Safety and Health (NIOSH). Many of these injuries could be prevented by using the right protective eyewear. Eye safety is more than a one-size-fits-all solution. Depending on where your crew is working, the hazards can change. **Premier Safety** can help you reduce the potential for workplace eye injuries with the right protective eyewear.

From proper care to proper usage, asking the right questions can help keep workers safe.

- ▶ How do I select the appropriate eye protection?
- ▶ Is our eyewear the right fit and comfort?
- ▶ How do we ensure our employees are using the protection provided?
- ▶ Do our employees need multiple options for eye protection?
